📊 EDA Task Sheet — Cafe Sales

(Use your cleaned dataset FROM PREVOIUS ASSIGNMNET)

Distributions

1. How is customer spending distributed across all transactions? Are most transactions low value or high value?
2. Does the quantity ordered per transaction vary a lot or stay consistent?

Categorical Patterns

3. Which item brings in the most total revenue — and is it the same item that gets ordered most frequently?
4. What does the breakdown of payment methods look like across all transactions?

Relationships

5. Does ordering more quantity always mean spending more? Visualize the relationship and comment on it.

6. How correlated are the numerical columns with each other? Does any relationship surprise you?

7. Does the location or payment method influence how much a customer spends per transaction?

Time Patterns

8. How does total revenue change over time? Pick a meaningful time unit (day, week, or month) and justify your choice.

---

9. In your opinion, which single visualization from above tells the most interesting story about this dataset? Replot it with proper formatting and write 3–4 sentences explaining what a cafe owner could learn from it.

Rules

- Every plot must have a title and axis labels
- Write one sentence below each plot explaining what it shows
- Choose your plot type based on what makes the data clearest

SUBMIT YOUR .**IPYNB** FILE WITH NAME_REGNO. FORMAT.
